Incident Response Playbook

Severity is assigned at triage. A P1 incident pages the primary on-call immediately and opens a shared incident channel.

The first response target for a P1 is 7 minutes. P2 incidents are acknowledged within 30 minutes.

Every incident produces a timeline entry and a follow-up action with a named owner.

The response phases and their owners are fixed:

Phase	Owner
Detect	on-call engineer
Mitigate	service owner
Review	incident commander
Close	engineering manager

On-call rotation is 12 hours per shift, with a handover note at the changeover.
